

# **Don't Forget:**

## **Team Recall:**

- Talal Abou Haiba - Product Owner
- Chris Persons
- Wesly Lim
- Gabriel Velazquez
- Luis Gonzalez

March 16, 2016

Don't Forget is a web application designed to remind the user of important assignments and due dates via SMS or e-mail.

- 1) Host or find a mailing server that will send out emails programmatically on time and at the correct date.
- 2) Have users enter their phone number and other contact information that will be saved in the database, which will allow ease of access to their previous reminders and enter reminders quickly.
- 3) Have a smooth login system that will allow frequent users to access their past reminders and post reminders in a more efficient manner.
- 4) Allow users to add friends and make a group upon logging in to send out group reminders.
- 5) Allow users to opt out of the service by texting back to avoid abuse; texting "stop" will automatically delete their information from the database and put them on a do-not-contact list.
- 6) Have a simplistic looking interface that the users can navigate around

## **Sprint User Stories:**

### **o Sprint 1**

- (3 points) As a developer, I want to be able to programmatically send emails to users so that I can have the reminders get sent out at the correct time.
- (2 point) As a user, I want to be able to type in my reminder message and submit it so that it can later be stored in a database
- (1 point) As a user, I want to specify when my reminder is 'due' so that I can be reminded of it on time.
- (1 point) As a developer, I want to set up a basic website layout so that I can begin developing the backend.

### **o Sprint 2**

- (3 points) As a developer, I want to host a mailing server so that I can send out the text messages and emails.
- (3 points) As a developer, I would like the user to be able to respond to the e-mail server.
- (2 points) As a developer, I want to be able to programmatically send emails to users so that I can later add functionality to have the reminders get sent out at the correct time.

- (1 points)As a user, I want to be able to set a daily reminder for X amount of days so that I do not have to set the same reminder multiple times.

### o Sprint 3

- (3 points) As a developer, I want to parse any emails we receive so that the user can perform actions such as OPT-OUT.
- (2 points) As a user I want to be able to set reminders for multiple people, so that I can efficiently work in groups.
- (1 point) As a developer, I want to look into buying a domain name and a hosting service so that the users can easily access the website.
- (1 point) As a user, I want to be able to be able to add friends to send reminders, and to approve friends before they can send reminders to me.

### • Product backlog:

- As a user, I want to have a snooze button to have a reminder be sent at a later time.
- As a user, I want to have a phone version of Don't Forget, possibly as an application rather than a website
- As a developer, I want to implement a way to send reminders not only from text messages, but from also email or Facebook.
